

YASH_CATALOG_TEMPLATE_VERSION: 1

YASH_PAGE_ROLE: GUIDE

YASH ORNAMENTS | CATALOG AUTHORING GUIDE

Illustrative sample products only. Import analysis NEVER publishes these examples.

Use the companion `authoring.json` and `generate_catalog.py`. Change each product's fields and local photo path, then regenerate. Do not edit or move the frame geometry in a PDF editor.

Required: Product Code (unique SKU), Product Name, Product Type, Category and one valid photograph. Product Type is gold, silver or diamond for EACH block; a batch may mix all three.

Product boundaries: paired `YASH_PRODUCT_BEGIN:<code>` and `YASH_PRODUCT_END:<code>` markers. Markers must match Product Code. Maximum two blocks per page; never split a block between pages. This GUIDE page, including these marker examples, is not a product.

Photo: one centered, fully visible jewellery photograph on a neutral background. Recommended embedded JPG/PNG at least 1024 x 1024 pixels. Rectangular/tall photos are contained with neutral padding, NEVER stretched or trimmed. Keep text, frame strokes, labels, logos and other products OUTSIDE the 80 mm square photo interior. Output master: 1024 x 1024; thumbnail: 320 x 320. Low resolution is flagged, not repaired by upscaling.

Geometry: A4 210 x 297 mm. Outer blocks (x0,y0,x1,y1) = (10,22,200,151) and (10,157,200,286) mm. Photo x=16..96 mm; y=block top+20..100 mm. Text x=102..196 mm. Markers at x=12 mm, y=top+6 and top+127 mm. Gap: 6 mm. 1 mm = 72/25.4 PDF points. Crop excludes the frame stroke outside the square.

Weight: metal weight in grams, e.g. 12.5 g or 10-12 g; positive ascending ranges only. Stone Weight ct is a separate positive carat number, not metal weight. Diamond is a product classification, not metal purity. If specifying purity for diamond jewellery also specify Base Metal.

Use `template_v1` mode. Supplier/scanned PDFs require explicit `legacy_pages` mode and manual correction/review. No OCR is implemented. Export full A4 pages: rotations are supported but cropped page boxes are rejected. Never assume failed template parsing will silently become a page import.

Next: upload > analyze > review square crops and fields > exclude/fix rows > decide Skip or Update Existing > confirm import as hidden drafts. Publishing is a separate explicit selection.

YASH_PRODUCT_BEGIN:SAMPLE-SILVER-001

PHOTO INTERIOR - NO TEXT OR FRAME INSIDE

Product Code: SAMPLE-SILVER-001
Product Name: Silver floral anklets
Product Type: silver
Category: payal
Description: Illustrative sample pair; not live inventory.
Subcategory:
Metal Weight: 85-90 g
Purity: 92.5%

YASH_PAGE_ROLE: GUIDE

FIELD REFERENCE | BLANK OPTIONAL VALUES ARE ALLOWED

Product Code -> product_code: required, unique case-sensitive SKU, 1-64 letters/digits/dot/hyphen/underscore

Product Name -> title: required product display name

Product Type -> metal_type: required: silver, gold, diamond

Category -> category: required existing catalog category

Description -> description: optional free text; blank remains blank

Subcategory -> subcategory: optional free text; blank remains blank

Metal Weight -> approx_weight: optional metal grams: 12.5 g or 10-12 g

Purity -> purity: optional silver 925 / 92.5%; gold 22K / 18K; requires base metal for diamond

Selling Touch -> selling_touch: optional numeric percentage, e.g. 92.5 or 92.5%

Selling Label -> selling_label: optional free text; no invented price

Stock Status -> stock_status: in_stock, limited, out_of_stock; blank = in_stock

Tags -> tags: comma-separated; blank = []

Video URL -> video_url: optional HTTPS YouTube/Vimeo link, never fetched by parser

Visibility -> visibility: all or hidden; blank = hidden; commit defaults hidden

New Arrival -> is_new_arrival: true/false; blank = true

Trending -> is_trending: true/false; blank = false

Pinned -> is_pinned: true/false; blank = false

Base Metal -> base_metal: optional gold/silver/platinum; conditional when diamond purity supplied

Stone Weight ct -> stone_weight_ct: optional positive number of carats, separate from metal grams

No price column is required. Existing schema does not calculate product prices during PDF import.

Additional images: upload through permanent product-media endpoint after import, not PDF image URLs.

Long text may wrap inside its field column. Generator refuses overflow. Keep every product inside its boundary.

Sample photographs are generated illustrative assets, not claims about actual inventory or purity.
